Summary

Results-driven Staff Software Engineer with over 10 years of experience in full-stack development, cloud-native architecture, and AI/ML integration. Adept in designing scalable, secure systems using technologies such as Java, Node.js, Python, React, and Swift. Expert in AWS, Kubernetes, Docker, and microservices architecture. Specialized in AI explainability, DICOM medical imaging, FHIR standards, and enterprise IAM solutions. Proven leadership in Agile teams with a strong focus on performance, compliance (HIPAA), and innovation through Generative AI and Cybersecurity best practices.

TECHNICAL SKILLS

Programming Languages: Node.js, React.js, Angular, Java, Python, PHP, Perl, Swift

Frameworks: React.js, Nest.js, Spring/Spring Boot, Express.js, Serverless Framework, Event Driven Framework

Databases: Postgres, Oracle, MySQL, DynamoDB, MongoDB

Cloud Platforms: AWS, Azure, Firebase, AWS Lambdas, AWS Glue, AWS SDK, Cloudfront

Containerization and Orchestration: Kubernetes, Docker, Amazon EKS

Integration Tools: MuleSoft, Informatica

Generative AI and Machine Learning: TensorFlow, PyTorch, AWS SageMaker, RAG, CNN, Deep Learning, NLP

Cyber Security: Secure coding, Vulnerability assessment, Penetration testing, Blockchain

PROFESSIONAL EXPERIENCE

Rapid AI

Staff Software Engineer (Full stack)

06/2024 - Present

As a Staff Engineer at Rapid AI, I architect and develop advanced AI-powered clinical solutions from concept (0) to launch (1), supporting life-saving products like CTA, LVO, Lumina-3D, and Aortic Measurement. My role includes designing secure, scalable applications in a multi-tenant **Kubernetes environment** and implementing robust full-stack features. I lead modernization efforts, drive unified authentication migrations, and champion configuration-driven user experiences.

Tech Stack: AWS (Lambda, S3, MRAP, CloudFront, SQS, SNS, Cognito, ELB), Python, Node.js, Angular, Kubernetes, Docker, Swift.

- Architected and developed AI-integrated clinical applications in a secure, multi-tenant Kubernetes environment.
- Built full-stack features using Node.js, Angular.js, Swift, and Python to support delivery and visualization of AI-generated medical insights.
- Implemented AWS Lambda and SQS/SNS to handle asynchronous processing of high-volume medical imaging data, ensuring system resilience.
- Managed global storage and retrieval of DICOM images using AWS S3 and S3 Multi-Region Access Points (MRAP) for low-latency data access.
- Spearheaded the Observability process for the multi-tenant architecture for logs, metrics, and traces.
- Designed and implemented AI heatmap explainability features integrated with RDV using Python for stroke, occlusion, and aneurysm detection workflows.
- Led a successful identity migration from AWS Cognito to Okta, including access control, SSO, and system-wide integration.
- Optimized content delivery and application performance using AWS CloudFront and ELB for global user accessibility.

Denso India Private Ltd

Senior Manager

08/2023 - 06/2024

As a Senior Manager at Denso, I led end-to-end product development for Mobility as a Service (MaaS). Responsible for overseeing the entire product lifecycle, from design to deployment. Specialized in utilizing React for front-end, Node.js and Python for back end, and a comprehensive AWS suite for cloud services. Additionally, implemented cutting-edge machine learning techniques for image processing.

Tech Stack: AWS (Lambda, S3, SQS, SNS, ELB, EKS, CloudFront), Python (ML/CV), React, Node.js, PostgreSQL, Docker, IoT.

- Oversee the complete product development lifecycle, including design, implementation, and deployment.
- Worked on cold chain logistics and enabled IoT integration to capture real-time data and perform analytics.
- Implemented advanced machine learning algorithms for image processing and computer vision using Python.
- Designed serverless architectures using AWS Lambda to process IoT data streams from connected vehicles.
- Utilized AWS SQS and SNS to decouple microservices and ensure reliable message delivery for the Bike Boy application.
- Spearhead change control processes to ensure seamless integration of updates and enhancements.
- Prioritize cybersecurity measures to safeguard sensitive information and ensure compliance with industry standards.

CGI Inc

Lead Engineer

03/2021 - 08/2023

The Gateway project is a comprehensive redesign and rewrite of an existing application, with the aim of deploying it on AWS using microservices and a combination of React, Python, Node-JS, and Java. The serverless framework is used to develop the backend, deploying backend lambdas hosted on API Gateway. The application is hosted on an S3 bucket for scalable and cost-effective hosting. Maintenance of existing applications and upgrading to updated tech stacks are also part of day-to-day activities, as NASBA has over 40 applications. Oversee the complete product development lifecycle, including design, implementation, and deployment.

- Developed one of a kind serverless file transfer system using AWS transfer family, step functions, glue jobs.
- Lead the design, development, and maintenance of Java and React -based applications.
- Utilize AWS services to improve application performance and reduce costs.
- Lead and participate in Agile development sprints and Scrum meetings.
- Optimize application scalability and performance.
- Design and implement cloud-based architecture solutions.

CSG International

Dev Consultant Senior

03/2019 - 03/2021

Ascendon is a next generation telecom solution with integrated billing and IOT services. The product is business solution software which works as a SaaS product to provide end to end solution for the telecom needs.

- Interact with key customer stake holders and gather requirement and document and design the solution on confluence.
- Finalize the Designs of the APIs to be implemented with the client.
- Design the solutions leveraging services from AWS and migrate the existing modules on react and AWS.
- Develop the MNP application using Lambda, S3, SQS, SNS and MuleSoft.

Mindtree Limited

Senior Engineer

01/2016 - 03/2019

Worked as a senior java developer with expertise in API development leveraging spring boot framework and strong understanding of data structure. Worked with Airline and Finance clients and spearheaded success with on time deliver and quality solution.

- Finalize the Designs of the APIs to be implemented with the client.
- Fix the issues with the existing Java application for SITA airlines and work on change request.
- Design the Swagger file and host it on cloud and generate the basic flows for development.
- Maintain the Oracle DB and write Stored Procedures.
- Develop customization using JavaScript and MuleSoft for intelligent financial metric app

Education

International Institute of Information Technology, Bangalore
Executive PG in AI ML With 3.84 CGPA

09/2023 - 01/2024

Bundelkhand University
B.Tech in Computer Science and Engineering (Institute of
Engineering and Technology Jhansi U.P)

06/2011 - 07/2015

Air Force School
Senior Secondary Education

Training and Certifications

AWS

AWS Solutions Architect (2023)

Bsides Goa

Blockchain and AI ML Security (2024)

Linux Academy

AWS Cloud Practitioner (2020)
